

**Real Solutions for Vaccine Equity: leaders in the scientific community in Ireland to call for vaccine equity.**

**Mission Statement**

As a community of scientific and medical experts, we are coming together to voice our concerns about global COVID-19 vaccine inequity. We aim to effect action that will facilitate access to COVID-19 vaccines to all countries.

We are petitioning the Irish government to support the following measures:

1. Support the TRIPS waiver to allow vaccine production in low- and middle-income countries as a sustainable solution
2. Ensure vaccine makers facilitate the open sharing of know-how and tech transfer to all relevant vaccine producers to increase vaccine production. This should be done through the World Health Organisation (WHO) COVID Technology Access Pool (C-TAP).
3. Facilitate urgent global redistribution of current vaccine supplies and commit to rational purchasing to avoid vaccine hoarding and wastage
4. Ensure that any strategy for booster vaccines is evidence based and ethical within a global context.

**This initiative is supported by Peoples Vaccine Alliance Ireland, the Doctors for Vaccine Equity, the Irish Global Health Network, Oxfam Ireland, Amnesty International Ireland and many individual clinicians and scientists.**
